ASX ANNOUNCEMENT

ENVIRONMENTAL IMPACT ASSESSMENT APPLICATION LODGEMENT

Anatolia Energy Limited (the "Company" or "Anatolia") is pleased to announce that its wholly owned Turkish operating subsidiary, Adur Madencilik Pty Ltd Sti (Adur) has submitted its Environmental Impact Assessment Application Document (EIA) to the Ministry of Environment and Urban Planning ("MEUP") for the Temrezli Uranium Project (Project). The Project is located entirely within its 100% owned Operation Licences which have been granted for an initial period of 10 years to 2023, renewable for up to 60 years.

The EIA incorporates the construction of a central processing plant (CPP) at the Temrezli site with a planned production capacity of 1.2 Mlbs per annum of U_3O_8 . It will process uranium bearing solutions from the Temrezli well field with potential to process uranium-loaded resin transported from any satellite uranium deposits developed in the future from Adur's other projects in the region. The EIA is based on a current Resource of 5.2Mt grading 1,157ppm eU₃O₈ for 13.3 Mlbs U₃O₈, from which 9.9 Mlbs of U₃O₈ are recovered over an initial mine life of 12 years, as detailed in the Company's recent Pre-Feasibility Study.

The EIA has been prepared by SRK Turkey, who have significant experience in both uranium ISR and Turkish environmental regulations. Whilst permitting and project approvals are progressed, Adur will commence some pre-development activities to ensure full scale development can commence as soon as possible which is expected to be in Q4 2015.

The Company's MD, Mr Paul Cronin said:

"Submission of the initial EIA is a significant milestone for Anatolia and takes the Company another step closer towards achieving our objective of actively participating in Turkey's developing nuclear power industry. We have strong relationships with our regulators in Turkey, and I have no doubt that the recent appointments of Cevat Err and Tom Young, ensures that we have a first class management team capable of permitting, building and operating the Temrezli uranium project. We are on track to see first production in 2016 but 2015 will be a defining period in our company's history.

We will continue to advance our project finance discussions, in parallel with our detailed plant design work, which is expected to yield significant capital savings. Whist we aggressively move Temrezli forward to development, we will also maintain our focus on regional exploration, with the intention of defining a resource on Sefaatli in early Q3."

The process conducted by MEUP will involve a public meeting to be held typically within 4 weeks of the EIA application, followed by a Terms of Reference. The Company will submit the EIA report in accordance with the Terms of Reference. Once the draft EIA is submitted, meetings will be held with the Review and Assessment Committee (RAC) made up of members from various governmental agencies. prior to finalisation. This period is followed by 10 days of Public Comment, prior to the issue of the final EIA Permit. The Company expects the process to be completed in Q4, 2015.
