DISCOVERY OF DISTINCTIVE COPPER MINERALOGY, WONGAN HILLS, WESTERN AUSTRALIA.

Red River Resources Limited wishes to announce that it has encountered a zone of distinctive copper mineralogy in its Reverse Circulation (RC) drilling program at Wongan Hills, Western Australia. Drill holes MRRC #19 and MRRC #21 have intersected native copper, bornite and probable cuprite as well as chalcopyrite in primary zone (i.e. fresh and unweathered) rocks underlying a strong soil copper anomaly lying over part of a northerly trending mineralised shear zone at the northern end of the Wongan Hills Range. The location of the drilling program is shown in Figure 1 and the location of drill holes MRRC #19 and MRRC #21 is shown in Figure 2. Samples from MRRC #19 and the upper part of MRRC #21 have already been submitted for chemical analysis. The copper mineralisation is accompanied by, as yet, indeterminate sulphides and/or tellurides, samples of which will be submitted for mineralogical determination.

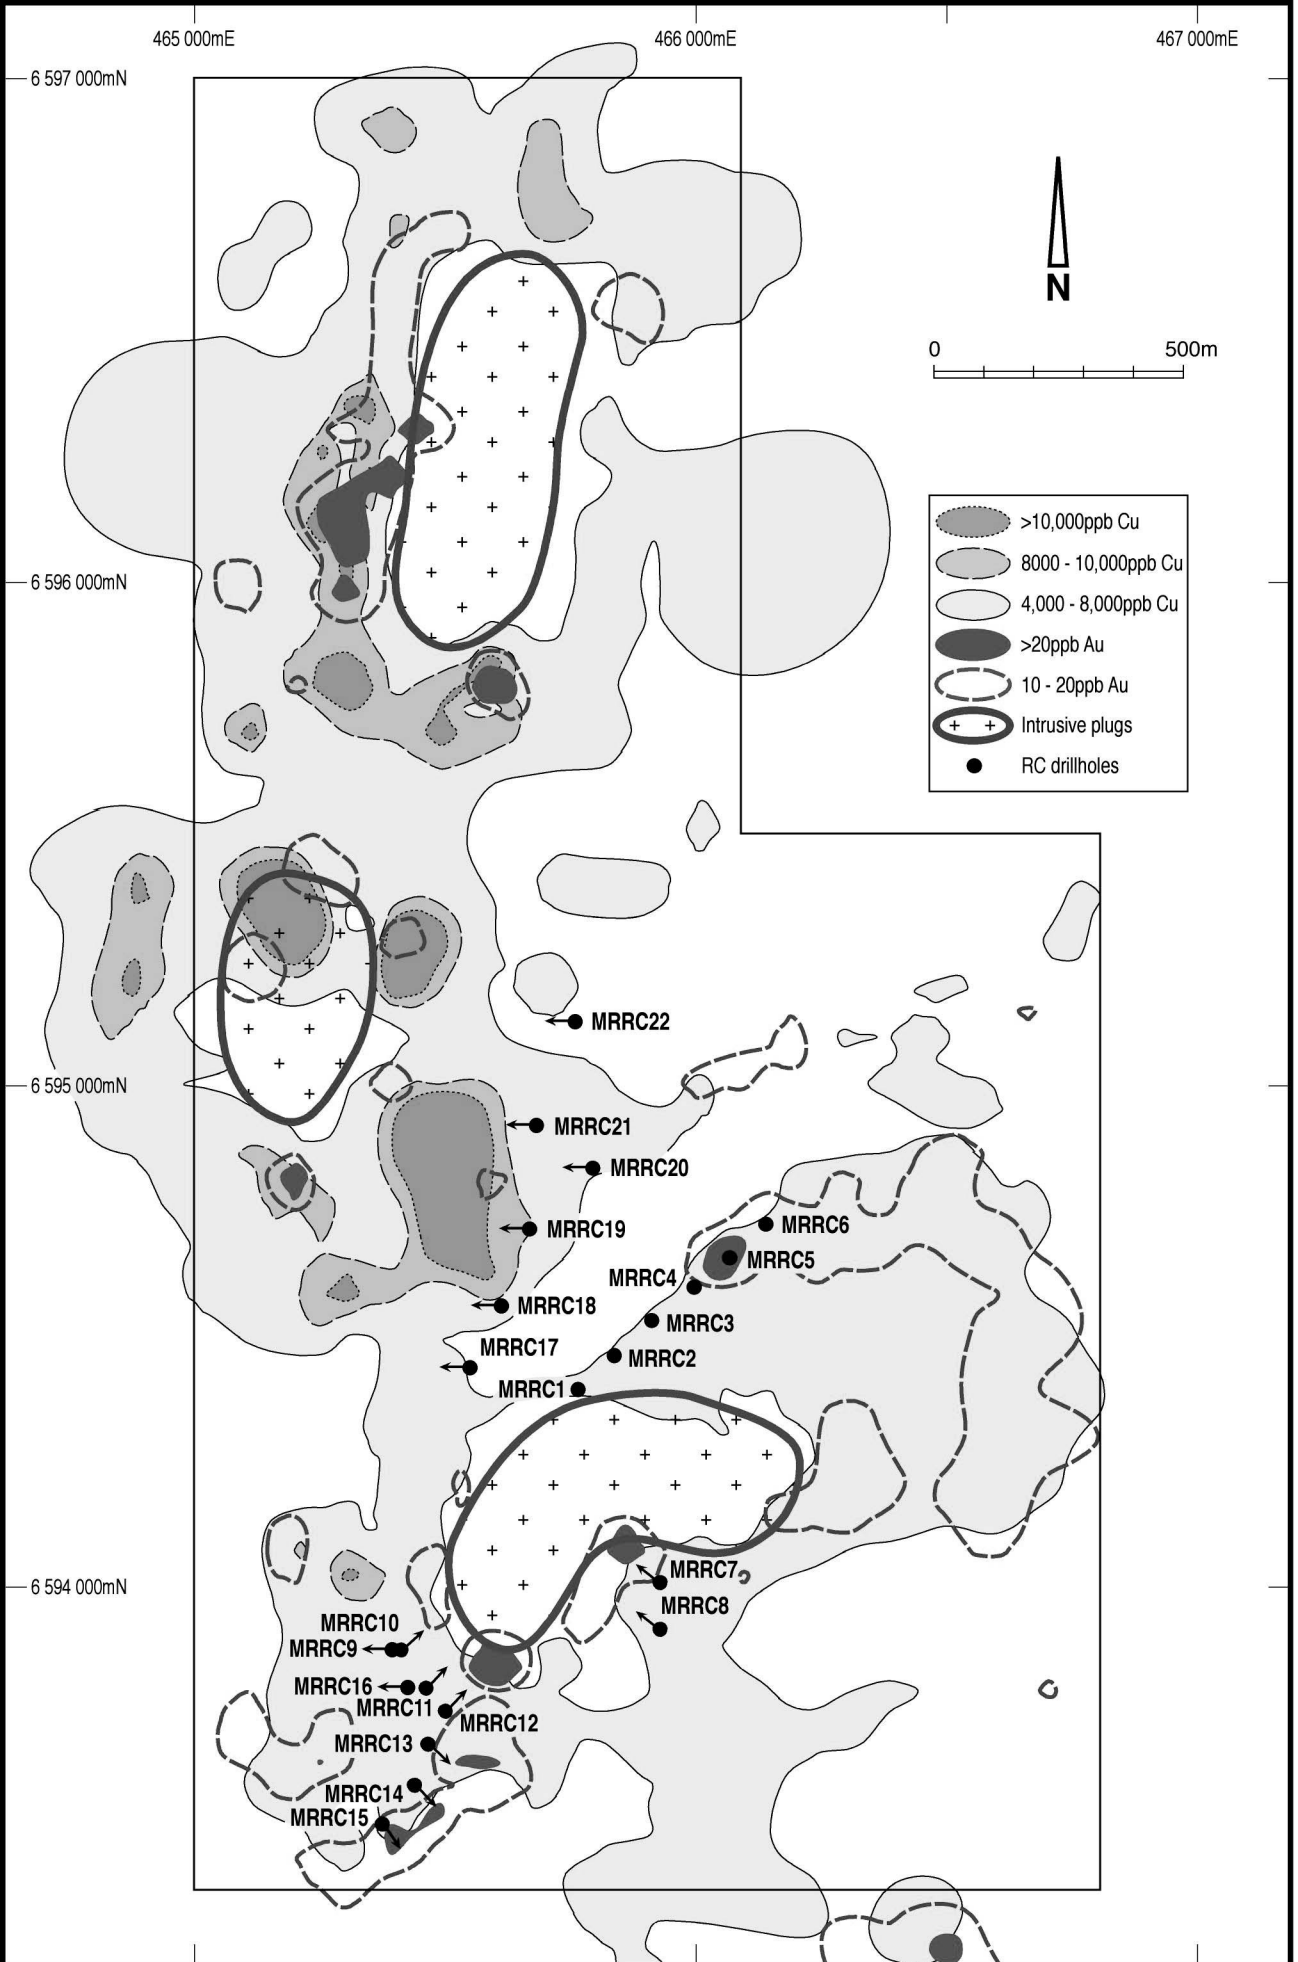

MRRC #19 will shortly be extended by diamond drilling and this should give a much clearer picture of the geological setting of the copper mineralisation.

On preliminary analysis, the copper mineralisation is inferred to have a strong alkali porphyry affinity. The mineralisation occurs within a system, 3,500 metres long of zoned copper, gold and palladium soil anomalies (for copper and gold see Figure 2) distributed around intrusive plugs.

The information within this report as it relates to geology and mineral resources was compiled by the Managing Director Mr John Karajas. Mr Karajas is a Member of the Australian Institute of Geoscientists. Mr. Karajas has sufficient experience which is relevant to the style of mineralization and the type of deposit under consideration to qualify as a Competent Person as defined in the 2004 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves, the JORC Code". Mr Karajas consents to the inclusion in the report of the matters based on information in the form and context which it appears.
