IN-FILL DRILLING SUCCESS AT BUCKREEF

Highlights

- 268,000 ounces upgraded to indicated resource category
- Buckreef resource increased by 21,000 ounces to 1.93 million ounces

Gallery Gold (ASX:GGN) today announced resource data from the ongoing in-fill drilling program at the Busolwa deposit, which is within the company's Buckreef project area in Tanzania.

As a result of the program an additional 21,000 ounces of gold have so far been added to the Busolwa resource bringing the current total to 806,000 ounces at a grade of 1.8g/t Au. The total Buckreef resource now stands at 1.93 million ounces (see attached table).

Importantly the in-fill drilling program, which to date has covered approximately 30% of the Busolwa resource, has moved 4.48 million tonnes at a grade of 1.9g/t Au into the indicated category, delivering 268,000 ounces.

"These results continue to increase our understanding of the Buckreef Project and there is a strong indication that ongoing in-fill drilling will add further resources to the indicated category," Gallery's Managing Director Hamish Bohannon said.

The Buckreef project is targeting gold production of 140,000 ounces per annum, based initially on open pits at Buckreef and Busolwa.
