eServGlobal Revises First Half Outlook.

Sydney 8 February, 2006

eServGlobal Limited (LSE: ESG & ASX: ESV), a worldwide supplier of independent and flexible telecommunications Value Added Services for Messaging and Charging solutions, today announced a revised sales outlook for the half year ending 31 Dec, 2005.

A long standing customer in Indonesia deferred late today what it had previously advised was a commitment to large incremental IN system capacity, which was included in our earlier First Half Outlook.

Our first half accounts are still being finalised and the audit not yet completed, but group revenue for the half is now expected to total A$32million, compared to A$35million foreshadowed on 21 December, 2005. The figure for the corresponding period of the previous year was A$17.446millon.

With this change, the first half EBITDA (Earnings Before Interest, Taxation, Depreciation, Amortisation) is now expected to be about A$1.3million (excluding costs associated with the acquisition of Ferma SA).

eServGlobal's Executive Chairman, Mr Ian Buddery, said, "It is disappointing to announce this variation but in our business highly respected long-term customers occasionally change or defer their commitments. We believe that a cautious approach to revenue recognition is necessary at all times. Based on all of the information available to us at this time, we expect that the situation with the project in Indonesia will be resolved within our second half and we are confident of achieving a strong full year result."

About eServGlobal

eServGlobal (LSE: ESG & ASX:ESV) is an international software and professional services company providing telecom service intelligence solutions, using a network-independent, open & convergent architecture.

eServGlobal offers a full suite of network services, pre-paid mobile re-charge solutions, end-to-end messaging, NGN (Next Generation Network) services and real-time convergent charging & billing for all voice & data services. These solutions help telecommunications carriers increase revenue whilst reducing operating costs and billing every call and message accurately.

eServGlobal's software provides an advanced, scalable and open-standards based services environment for voice and data, which is suitable for fixed-line and mobile networks, both circuit and packet switched.

Over 120 million people, across 50 countries, rely on eServGlobal systems for their telecommunications services.
